### Display of Current Calibration Factor and Restoring Factory Factor

When a calibration has been performed, a calibration icon (CAL) will appear, showing the currently used calibration factor.

#### 1.1.5 Direct Modification of K Factor

If K24 operation continues without changing the battery, the value of the calibration factor shown in the display will be the one that has just been saved. If the desired value is exceeded, repeat the calibration procedure.

#### 1.1.6 Foreword

The indicated value changes in the direction indicated by the arrow to be displayed on the display. If the rotation of the turbine is not sufficient, the calibration must be repeated.

#### 1.1.7 Notice

When the Factory Factor is confirmed, the old User Factor is automatically replaced by the Factory Factor, thus it is ignored.

#### 1.1.8 IN FIELD CALIBRATION

The system can be recalibrated while it is in operation to obtain the same as the REAL value.

#### 1.1.9 Notice

If the system needs to be disposed, the parts which make it up must be disposed of separately.

### Technical Data

- **Flow resistance (Range):** 0.30 Bar at 100 lit/min. 4.35 psi at 26.41 gal/min
- **Bursting pressure (Min):** 10÷90 (litres/min) 2,65÷23,8 (gallons/min)
- **Flow range:** -10 ÷ + 50 (°C) 14 ÷ 122 (°F)
- **Temperature range:** -20 ÷ + 70 (°C) -4 ÷ 158 (°F)
- **Resolution:** 1
- **Accuracy:** ± 1%

### Maintenance

#### 1.4.1 METER CONFIGURATION

The METER has a built-in calibration feature that allows the user to change the K FACTOR. This feature can be accessed by pressing the CAL and RESET keys together. Keep these keys pressed for 1 second to enter calibration mode, shows "CAL" and displays the calibration factor used by the Meter.

#### 1.4.2 Notice

To change the calibration factor, the METER must be in calibration mode. If the system is not in calibration mode, a warning message will appear. To change the calibration factor, press the CAL key while the METER is in calibration mode.

### Disposal

#### 1.5.1 LITERATURE

- To reduce the risk of ignition of a flammable or explosive atmosphere do not use Voltmeter or similar powered equipment in the vicinity of the system.
- To reduce risk of ignition of a flammable or explosive atmosphere disconnect power before servicing.

#### 1.5.2 Notice

- In case of the unlawful disposal of said wastes, fines will be applied as defined by the laws in force.
- Any hazardous substances in the electrical and electronic appliances marked with this symbol on the product and/or packaging not applicable as defined by the laws in force.

#### 1.5.3 Recycling and Disposal

- These must be disposed of by companies that specialize in the collection and disposal of industrial waste and, in particular:
  - 6-figure Reset Total plus x10 / x100
  - 5-figure partial

- The METER is designed to be reusable and can be recycled.

### Exploded Views and Overall Dimensions

#### 1.6.1 P E T C H N I C A L D A T A

- **Flow range:** 10÷90 (litres/min) 2,65÷23,8 (gallons/min)
- **Temperature range:** -10 ÷ + 50 (°C) 14 ÷ 122 (°F)
- **Resolution:** 1
- **Accuracy:** ± 1%

#### 1.6.2 Notice

To change the calibration factor, the METER must be in calibration mode. If the system is not in calibration mode, a warning message will appear. To change the calibration factor, press the CAL key while the METER is in calibration mode.

#### 1.6.3 Maintenance

- **Flow range:** 10÷90 (litres/min) 2,65÷23,8 (gallons/min)
- **Temperature range:** -20 ÷ + 70 (°C) -4 ÷ 158 (°F)
- **Resolution:** 1
- **Accuracy:** ± 1%
