### Piusi MCO 2.0 Range

MCO 2.0 is much more than just an oil management system; it is designed to give the manager complete control over their garage. It helps to plan and monitor all jobs, including mechanic task scheduling for each bay, as well as managing the accurate dispensing of fluids.

#### Basic installation

- › **GPV Bi-valve** - made up of two solenoids; a larger one dispenses at full flow & shuts off when the transaction is almost complete. A smaller one then allows the remainder to trickle through for accuracy. One GPV is needed per dispensing reel.
- › **Easyview nozzle** - manual nozzle with LCD display, which shows the user what the GPV has dispensed
- › **USB Software** - controls up to 30 GPVs, as well as many more garage activities.

## Complete garage management functionality...

### Monitor & control your jobs

- › Add and monitor outstanding, in process & completed jobs
- › Add fluid dispensing transactions to a job including how much to be dispensed, in what bay and using which reel
- › Add any other jobs e.g. brakes, tyres, bodywork, who is going to do it, in what bay/area & how long it should take
- › View how much of a job is complete & the tasks outstanding

### Manage your workers' time & tasks

- › Add and view users authorised to perform certain tasks
- › View workers currently busy, what bay they are working in & who is free to perform a task
- › Add worker shifts to see who is available to allocate jobs to

### Monitor & display tanks on site

- › Set up & view the tank/drum/storage containers on site, their location and which reels they are connected to
- › View quantity of fluid left in a container for stock monitoring

MCO 2.0 wall mounted & touchscreen tablet control units available, as well as bay information screens & customer progress TV modules. Please ask for more information.

### Manage workshop areas

- › Set up garage areas to easily identify the bays free/in use within them e.g. corner workshop, main garage area
- › Allocate the reels that operate within the area so that jobs can easily be allocated to a particular bay
- › Colour code reels for easy reference i.e. all oil reels one colour & all antifreeze another
